# Experiment 2

**AIM: Design Employee Payroll System using Inheritance, Interface & Polymorphism**

**Source: Program.cs**

**Code:**

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace Practical_2
{
    internal class Program
    {
        class Employee
        {
            public int Empid;
            public string Empname;
            public double Basesalary;

            public Employee()
            {
                Console.WriteLine("----------------------------------------");
                Console.WriteLine("        Employee Payroll System");
                Console.WriteLine("----------------------------------------");
            }

            public void AccepDetails()
            {
                Console.Write("Enter Employee ID: ");
                Empid = Convert.ToInt32(Console.ReadLine());

                Console.Write("Enter Employee Name: ");
                Empname = Console.ReadLine();

                Console.Write("Enter Employee Base Salary: ");
                Basesalary = Convert.ToDouble(Console.ReadLine());
            }

            public void DisplayDetails()
            {
                Console.WriteLine();
                Console.WriteLine("Employee ID :" + Empid);
                Console.WriteLine("Employee Name: " + Empname);
                Console.WriteLine("EMployee Base Salary: " + Basesalary);
            }

            public virtual void CalculateNetSalary()
            {
                Console.WriteLine("Calculating Salary....");
            }
        }
```

```
        class FullTimeEmp : Employee
        {
            public Double NetSalary;

            public override void CalculateNetSalary()
            {
                var HRA = Basesalary * 0.20;
                var DA = Basesalary * 0.10;
                NetSalary = Basesalary + HRA + DA;
                Console.WriteLine("Calculating Salary of Full Time Employee.....");
                Console.WriteLine("Net Salary of Employee: " + NetSalary);
            }
        }
        class PartTimeEmp : Employee
        {
            public Double NetSalary;

            public override void CalculateNetSalary()
            {
                NetSalary = Basesalary;
                Console.WriteLine("Calculating Salary of Part Time Employee.....");
                Console.WriteLine("Net Salary of Employee: " + NetSalary);
            }
        }

        static void Main(string[] args)
        {
            int choice;

            Console.WriteLine("1. Full Time Employee");
            Console.WriteLine("2. Part Time Employee");
            Console.Write("Select the type of EMployee: ");
            choice = Convert.ToInt32(Console.ReadLine());
            Employee emp = null;

            if (choice == 1)
            {
                emp = new FullTimeEmp();
            }
            else if (choice == 2)
            {
                emp = new PartTimeEmp();
            }
            else
            {
                Console.Write("Enter Valid Choice");
            }
            emp.AccepDetails();
            emp.DisplayDetails();
            emp.CalculateNetSalary();
            Console.ReadKey();

        }
    }
}
```
